

The study was based on Victor Turner's theory of rituals and symbols. I have used Turner's definitions and classifications of symbols, as well as his theses related to . study of symbolism. In Turner's work we find that ritual is a constant "knowledge and experience" that is neither conscious nor unconscious; they are a process that can be described as a "transition to awareness", as a "transfer of experience in consciousness". Turner also emphasizes that such a process is accompanied by an "exit" from the state of sleep in which a person usually resides. Turner believes that this process of "transference and awakening" is carried out through symbolism.
